Thread: [Are malware and viruses considered beginner hacking?](#)

SevenHaze - April 21, 2024, 7:00 pm

Compared to say RAT and Phishing.

Bastille - April 21, 2024, 7:10 pm

It depends.

Viruses and RATs are both malware. Malware is a category of programs (software) with malicious intent :

mal(icious)(soft)ware = malware.

Sending malware to infect computer can be considered as beginner, as there is nothing too technical. You just need to find a way to spread your malware.

RATs are more advanced to use because you need to setup a C2 server to control it, and also be more cautious regarding your anonymity by using proxies and stuff, so you also need to understand what are ports, how IP addresses work (private, public, ipv4, ipv6, and so on).

Now there is another category which is "malware programming". You need advanced skills in programming for it. You can start with Python when you begin, but if you want to create effective malware you usually need to go through C/C++. You can learn more about it here :

<https://maldevacademy.com/>

However, be aware that dealing with malware can also be dangerous for you. Besides, it's illegal. If you're interested by this field keep in your mind that cybersecurity pays well.

SevenHaze - April 21, 2024, 7:28 pm

I don't care what is illegal or not, the people who have made the laws have betrayed me and even before that betrayal I knew they would. Life as a law abiding civilian sucks I just want to befriend someone who knows what they are doing and change the world -SevenHaze

Learning hacking is not that easy, it's a long path. Besides, if you plan to be involved into hacktivism be aware that there are high risks for you, especially if you are a beginner and if you don't know what you're doing and how to protect yourself.

Start here to get an idea of what is hacking : <https://hackforums.net/showthread.php?tid=6263412>

Well I use other peoples devices remotely in a way that has yet to be discovered so I know a thing or two

Bastille - April 21, 2024, 7:36 pm

So you're using like a "0-day" exploit, but you don't know the differences between malware, virus, RAT and phishing ?

When you say "people"s devices" you mean like random people ? You talk about fighting for what seems to be just causes, but you use computers of innocent people?
