Thread: [\[HELP\] Connect to RAT | FreeDNS |](#)

D3ath_GuN - May 2, 2024, 7:19 pm

Hi,

I started following the guide made by Jinu with [FreeDNS]. I followed the guide from A to Z. I installed the wget program via Chocolatey. When I run the program in .bat, I see it in the task manager, wget.exe is running, but it closes after only a few seconds, so I can't connect with the RAT. I don't know how to keep the wget program active. Thank you in advance.

Best regards, D3ath_GuN

wget will exit when it completes. I don't understand what you're trying to do. Also, installing chocolatey, then installing wget, both of which require elevation, is something that I hope you're not doing on victim systems. LOLbins are what you want to use.

Okay, you're using this tutorial: <https://hackforums.net/showthread.php?tid=4251545>. Does the batch script complete and cause your public IP address to display in FreeDNS?

I do hope that you're running this on your home network, too.
