Getting leaked credentials from dbs

This thread will give you a tutorial on how to find leaked credentials from database leaks for free. There are a few websites to search database leaks but they are mainly paid, so I will be showing some free ones.

Leak lookup list

1. [BreachDirectory](#) - Breachdirectory is a free service which allows you to see information from database breaches. It only gives passwords/password hashes but it doesn't give you other leaked data like ip addresses etc if yk what I mean.
2. [Illicit services search](#) - This website has been closed two times but you never know, maybe it'll start up again one day. It's basically like breachdirectory but it gives more info and there are more breaches on there.

This is hardly a tutorial. Also what kind of leaked credentials? Logins? PII? Why not bother just spending \$5 for a de-hashed account to look up what you need then move on? For those seeing this now who don't have cash, just learn to use Google dorks and research where pw dumps are and link with HIBP to know which to look in ffs.
