Thread: [SMTP server setup service for mass mailings](#)

SIM-5525056 - May 13, 2024, 5:24 pm

Hello everyone,

I'm offering an SMTP server setup service for your mass mailing purposes.

SMTP setup service on new or existing VPS server with IP warmup guidance. Without IP warmup, fresh setup can inbox so many small business emails, excluding business emails hosting on Office365, G-Suite/Google Workspace, and Barracuda

Features of this SMTP server setup service

The SMTP server domain will have a high domain authority

The SMTP server will have a single IP address

The IP address of the SMTP server will be clean and free from blacklisting

Create any number of mailboxes on the domain and/or subdomain per SMTP server

All DNS records (MX, DKIM, DMARC, SPF, PTR) including EHLO will be well-configured

SMTP Server will have 10/10 results on the mail-tester website

No sending limits on the SMTP server

Pricing for this service

SMTP server setup = \$50

Domain name = \$15 max

1-Month VPS server = \$15

If you provide the domain name and VPS server, then I can just set it up for you.

Contact me or start contract first

Hacked email account logs coming in using this SMTP server service for bulk webmail email send outs. This is a really good solution for webmail email send outs.

7 - June 20, 2024, 11:07 pm

Posting to come back to this.

I'm looking forward to seeing some reviews.

Life sending stat of bulk SMTP server best for bulk webmail send outs.

SIM-5525056 - June 24, 2024, 12:15 pm

Still active offering this service

briggs101 - July 1, 2024, 8:11 pm

Any review on this service yet? ..and still taking orders?

obtainhigh - July 2, 2024, 12:11 am

Why would anybody buy cold email servers? with 20% delivery rate to non corporate owned email smtps outside of Gmail and Microsoft?

There are so many reasons to buy cold email servers. Despite its high inbox efficiency when sending emails to your B2B email list, assuming you have bought a new email list (probably with dead emails in it) and need to validate them they play a very crucial role in helping remove dead emails. SMTP providers like AWS, Sendgrid, etc are not spam tolerant and highly sensitive to dead emails and bouncebacks. Buying cold email servers or SMTPs can help you build a valid email list with time while converting sales, clicks, logs, and downloads. Cold email servers is for someone who wants to send bulk emails without having to worry about their SMTP getting suspended after sending low volume.

These cold email servers have a high inbox rate of up to 99% if properly warmed up and they can even help you save money with time. But for spammers, that patience is most time not needed as they want to blast emails at once. A properly warmed-up and well-throttled cold email server can inbox email service providers like Gmail, Microsoft, Yahoo, etc.

These cold email servers serve both an email marketer and an email spammer.
