K-SMS Sender: PowerFull Sender For Spamming

Features:

Multi-Gateway Support:

Seamlessly integrate with various SMS gateways for efficient message delivery.

User-Friendly Interface:

Simple and intuitive command-line interface for easy operation.

Real-Time Tracking:

Monitor message delivery status in real-time, providing insights into successful and failed deliveries.

Personalized Sender ID:

Customize sender identification to reinforce brand presence and trust.

Concurrent Message Sending:

Utilize multi-threading capabilities to send messages concurrently, enhancing efficiency.

Error Logging:

Automatically log failed message deliveries for error analysis and troubleshooting.

Account Balance Tracking:

Keep track of account balance to ensure continuous SMS sending capability.

Dynamic Message Content:

Send dynamic messages by customizing content based on recipient data.

Supports Various Message Formats:

Send messages in multiple formats including plain text, Unicode, and multimedia.

Flexible Thread Management:

Adjust the number of threads dynamically to optimize performance based on system resources.

Secure Authentication:

Authenticate with SMS gateways securely using API keys, tokens, or passwords.

Easy Input Handling:

Easily input phone numbers and message content from text files for convenience.

Comprehensive Documentation:

Detailed documentation provided for easy setup and usage.

Customizable Logging:

Configure logging options to suit specific requirements and preferences.

Robust Error Handling:

Handle errors effectively to ensure smooth execution under various conditions.

Cost-Free Solution:

Maximize your SMS marketing efforts without any financial investment.

Extensively Tested:

Rigorously tested for stability, performance, and security.

Note: A lot of users said in my previous articles that the things I shared were viruses and that I was

spreading stealer. ?

I have no idea how these self-proclaimed super intelligent guys came to the conclusion that the file is virus-ridden. The reason some antivirus programs flagged the files as virus-ridden was due to the way the script was packed in the executable file—there was no digital signature or certificate when the executable file was created—as well as other factors. Therefore, the next time, please do some research before talking stupidity.

How do I contact you, skype or telegram

T3n - August 26, 2024, 3:48 am

So, i wouldn't trust this either, its a .exe not even a command line. But in any case just use it inside a VM to make sure you don't expose anything. Scan the file first too.
