Thread: [Anticheat Bypass](#)

vidi444 - May 16, 2024, 6:11 pm

Hello Dear Hackforums Community,

i really dont know if i am at the right place to ask this, but if i need help.

So basically there is this new game called „Arena Breakout Infinite“, i really wanna try it, but they have this stupid Hardware Restriction...

Basically what i wanted to do is, inject a dll, that bypasses this restriction. The only problem is now, the Anticheat. They use the ACE from Tencent.

So my question is, is there a way to disable the anticheat, completely or just for like 10 seconds, so i can inject the dll.

Please if you have any clue, or know where i could find informations to that, tell me.

Thanks!

Rename the DLL you want to load to "CrashSight64.dll" and replace it with the original one.

C:\Arena Breakout Infinite\ABInfinite\Binaries\Win64

or do this

-Windows search bar - search "regedit"

-Go to

Computer\HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Class\{4d36e968-e325-11ce-bfc1-08002be10318}

-Then go to folder called 0000/0001 or whichever it is for you

-Search for your graphics card name, once found click on "Driver Desc" next to the card name and change the name of your card to NVIDIA GeForce RTX 2080

-Once done restart your PC and open the game

if your settings are back at default after the restart you have to force to overwrite the graphics card name.

if the rtx 2080 doesnt work for you, rename it to anyother card which is accepted by the game

Not sure if the post above worked or if you've even tried yet, but assuming you're not trying to do anything other than legitimately play the game, I wish you the best of luck with getting the issue sorted!
