Thread: [Is there a result ?](#)

kaaled - May 26, 2024, 9:46 am

Hello, I was asked a lot about RATs in Darknet and found many from 50\$ to 1000\$, I did not buy anything because I am not convinced that these tools work and then there is no guarantee, I want to know through people who have used this tool does it really work, I would like to hear from people with real experiences

Some do, some don't. It depends on if you're asking about a tool (singular) or tools (plural). Some are scams; some are old; some work quite well. All get detected by antivirus. Plenty of reviews, vouches, comparisons, and recommendations if you look.

Do you have experience with any tool ?

Mainly Meterpreter. Covenant C2 needs more testing.

You have not specified any specific RAT, so nobody will be able to say anything about the tools you saw on there.

Do RATs in general work? Yes, sure. However as the user above already pointed out, some do, some don't. Some are better than others, some don't work at all.

If you're looking for suggestions as to which RAT to use, I think it'd be better to specify your needs.
