Tom Cruise is about as real as a scientologist E-Meter.

Auditing is a very big deal in Scientology, its expensive version of Roman Catholic confession, administered by an auditor posing hundreds of questions to a paying subject holding on to two metal canisters wired to an Electropsychometer, or E-Meter, which measures the body's reactions to the questions somewhat as a lie detector does. Subjects are encouraged to bring up any disturbing past memories or transgressions and get them out in order to be "cleared" to go up the Bridge to Total Freedom, through many levels leading to eternal spiritual happiness, a process that can cost hundreds of thousands of dollars.

Tom Cruise allegedly chose a woman, then had people manipulate her into breaking up with her boyfriend by showing her his "audit results,"

The church made her dye her hair and shave down her teeth. Then when she had a severe headache while talking to the church leader so didn't answer questions well, Cruise allegedly slammed his fists on the table and yelled at her for insulting the church leader then had people in the church tell her it was over between them and left them to throw her out and made her do manual labor for the church.
