Thread: [Hijacking Telegram Bots](#)

FraudxCentral - June 4, 2024, 6:38 am

I don't really see anyone here mentioning this little trick... So here ya'll go.

You can easily discover telegram tokens a number of various ways.

- Public source code hosting services like Github, Replit, GitTea, etc.
- Sniffing network traffic
- Google Dorking
- Reverse Engineering

and I'm sure there are plenty of other ways.

We will look into Google Dorking - its simple, easy, and can easily be customized as far as search styles and approach.

For more background on dorking - [WONT LET ME POST LINKS]check out this site.

If we goto google and enter - [deleted] - - We will see nothing but results from that specific site with our keyword being matched. Now that we have some tokens, lets dump some using python.

Downloads:

[[WONT LET ME POST LINKS]]

Using this method and depending on your target you can easily steal first hand - private traffic from stealer logs, phishing pages, keyloggers, and even shops and autosshops.

Clarity & Useful Notes:

Content has been deleted because new members like you would fall into this and get scammed.
OP posted this and now is waiting for beginners like you to fall into this.

You're welcome.
