Thread: [\(Looking\) Cheap linux VPS paid with crypto](#)

AC070 - June 6, 2024, 10:14 am

Specs don't matter so much. I need something with reliable 24/7. More than 6 GB of available storage. And at least 2gb RAM. Preferably Debian. Preferably loose rules as well. Send me a PM/reply if you know of any.

Jolliness5095 - June 14, 2024, 10:46 am

I have found a tiny company called HostVDS where you can pay with crypto.

I cannot vouch for the performance of it, I havent benchmarked it at all, but when it comes to uptime, I havent seen a single time it was down. There were articles a couple years ago saying that it is unreliable but personally (at least recently) there were no issues for me.

One bad thing about it, is that it only supports basic servers and volumes, so not even basic things like backups, even more so things like load balancers.

A couple other things to note:

- It's ridiculously cheap, so I do not expect it to be very good performance-wise
- It is often out of stock, especially in us regions
- No ipv6 support
- Im not sure about the security of this, so don't put sensitive stuff there
- No KYC :D (you only need to put in details like address and name, and stuff, but theyre not verified)

Cannot post link because: "Sorry, you cannot post links, videos, or images until you've made more than 50 total posts or have upgraded."
