Thread: [Rust in Android Development](#)

We all know especially those who love to read latest trends that Rust is somewhat awesome and secure but even they have claims that this is true, there is no such thing as perfect programming language and whatsoever as discussed in some threads here.

Now I was wondering, what do you guys think if some of you were to develop an android project and parts of it would be written in Rust? What is your opinion? Would love to here from you guys.

Here is an overview.

For some individuals learning Rust is easy but for some its hard as its nature is kind of different from other programming languages unlike C in which if you are familiar with it then its easier for you to skim and scan other languages such as C++, PHP and others alike.

Anyway, I hope you read it. ?
