Thread: [C# Opening a Resource File](#)

john ronaldsad - June 14, 2024, 11:07 pm

Hello, I am getting the following error

Code Argument 1: cannot convert from 'byte[]' to 'string[]'
and the code causing that error is

Code Process.Start(Properties.Resources.telephone);
Any and all help to resolve this issue will be much appreciated

Properties.Resources.xxx is embedded resources you stored in your app.
-string, images, etc

the process.start cant start something that is not a process(application) ex: chrome, notepad.

here is an example:

Code Process.Start("cmd.exe");
Process.Start("notepad.exe");its basic.

better way:

Code foreach(var p in Process.GetProcessesByName("chrome"))
{//do your logic}
foreach(var p in Process.GetProcesses)
{//do your logic}and so on

to send data to console to console on diff app you can use Process.StartInfo and adding arguments(args) so the console that gonna run from the process call with receive string data in Main(args)

Same logic to pass data from a winform app the start console app.

Also process class can use eventhandler to receive information on process closing.

Useful class when used correctly!
