Thread: [What feature u are missing or would like on a RAT?](#)

SpyNet - June 16, 2024, 9:51 am

i have been in the works for really long, i am the developer of Spynet RAT, we have many features , sleek design.

I am asking the community , what features you would guys want that are missing maybe? Or in general, what you want me to add.

We are releasing soon along with shared crypter. I have been in dev for many months working on this project.

Looking to get it even better, please leave your thoughts what features you want or in general the builder stuff or bypasses and all. We have good security

I cry blood - June 16, 2024, 10:05 am

Using your zombies for scanning purposes would be nice. If your RAT targets the Windows platform, you could have your zombies scan the internet looking for active services on TCP port 3389 (Windows RDP). If a valid RDP service is found, the zombies will then password spray the RDP with commonly used RDP credentials. Once/if the zombie manages to login, they then upload/execute a copy of your binary to claim another infection.

It would be nice if you implemented a Discord exfiltration feature (via a Discord web hook). If the botmaster decided to steal files, password, etc, it all gets uploaded onto a Discord server, rather than their machine itself. This helps avoid leaving behind any digital-forensic evidence.

All goes to a discord server "This helps avoid leaving behind any digital-forensic evidence" lol how is this safer

Its not a botnet or sorry if i mistaken your words, our RAT is native windows yes, all windows works perfect .

The "cracking" or scanning lets say for RDP is really not worth our time/our focus and i dont think our customers would really use that feature, or am i wrong? But to connect to RDP and drop file there if you mean, that is a lot of work.

Discord is not safe for these my guy , rather use telegram or nothing .. botmaster is our rat, we have sessions stealer, all wallets stealer (90+), it checks for any crypto exchanges, also remote controlling (invincible to the user) and normal.

But your idea sounds cool i learnt something from this , thanks to you so much sir

You login via a VPN. Keeps everything from going straight to you. That's it. Its not extremely better, but I would personally rather items get send there instead.

Yes absolutely !! NO-GO. Discord and stupid stealers using discord, anyone using that is stupid, you can get your weebhook stolen so easily and all your stealers infos.

You right on that ,

Why not Telegram which is actually safe? The webhook can be stolen so easily if someone has been infected, the webhook can be found.

If you seriously do ratting dont use discord, use Telegram , it could be used as a Telegram bot which i am actually building one for our public group just to automate things orders , support.

You right, but always you have to use VPN if using RAT or similar tools .. + proxies maybe.

See, I didn't know webhooks could be stolen. That's news to me. It makes sense why you wouldn't want that feature. Disregard

Yes absolutely go watch on youtube how easily they can be stolen.

If i am given an .exe that sends info to discord, the webhook i can get like that if you know what you doing.

+ Discord can get you in trouble we've heard that from our group members before too, shut down their whole server and whole info gone, but its rare. Dont use discord for this stuff guys ,,, please.. Telegram only, even if that.

Lol no, discord would be very bad idea. If you think you are immediately safe because of a VPN you are way off

SpyNet - June 16, 2024, 10:47 am

Thats what i said to these people ?

Man ... vpn doesnt save you, discord destroys you if you use malware there. Do-not. Agree broother !

Hahah wtf

The guy is almost saying 'If you want to keep something a secret and you can't risk anyone in the world knowing, tell the person with the loudest mouth about it'

Exactly, some people just dont know security that well , oh well

SO.. we are still looking is THERE ANY .. features that are not on a RAT you would like to see?
We have a lot of features, really cool ones and useful ones for remote administration, this will be top-tier RAT on forums (SpyNet)

We are releasing tomorrow, depends on my boss !
