Including HTTP panels RATS, IRC Botnets

Quasar

Slient Miners

Crypting

Just ask any questions here if you have any, I can setup majority of RATS and give helpful advice on how to spread and just getting things ready so you dont blunder and waste all your money

How to install Tor On Linux and use it as a control panel for an HTTP

Id like to make a community that is willing to share information and help one another out with malware related activities!

Why do all the 31 software you offer for free download via TG have the same virus?

Trojan:Win32/Rhadamanthys!pz
