Thread: [Skill - Code a tool to extract emails from sources](#)

lightduty - June 17, 2024, 2:20 pm

Already create (Will modify as source)

Check here:

Hacxx Mailing List Mailman Collector

<https://files.offshore.cat/H4VBkyej.html>

- 1 - Change url tag to description
- 2 - Extract emails, to extract use regex on emails
- 3 - Show to the user or generate a link to gmail with the emails in To: parameter or BCC:

Check here for regex:

Hacxx Email Collector for Xenforo V1

Hey,

Thanks for contributing to hackforums. Is this something you made?

Yes, the thread is just to show a new idea/skill to develop a new app.
Since it would take me more time to develop and no one will use it.

Here's how i will do it.

Fludems - June 18, 2024, 3:08 am

Ahh okay I don't know what you mean

Do you mean it would take a lot of time to make a fully polished version of this, but it works as a proof of concept?

lightduty - June 18, 2024, 6:38 am

Anyone that donate for the application i will develop. Any person should be able to use the instructions above and complete the tool.

Juifer - July 2, 2024, 4:10 am

I can help you, I coded a software that can extract emails from any site, it's not your average email scraper, it can scrape any site/forum/blog in less than 10 seconds and it works on 99% of websites. You have multiple scraping ways and you can scrape keyword related mails, you can also scrape by specific year. So far I think it's one of the best scrapers on the market.
