There is no explanation in there. Look at it from a perspective of someone who doesnt know much on hacking tools

Just list what they do and you would probably see an increase in dls

From what I see there are 4 different options in the builder.

Shortcut exploit
VBS
BAT
HTA

I think these are pretty straight forward to understand

All they do is download and run file in silent mode . They will drop downloaded file in temp folder and than it will run using PowerShell .
This tool is used to distribute your payload / Rat / Stealer / Keylogger . If you are using trojans this tool is a plus in your hacking gadgets .

I cry blood - June 22, 2024, 5:26 pm

This is a trojan downloader, correct? If you dont mind me asking, why does it have exploit in the name? Does it bypass a security feature of some sort?

Good to know. Thank you ?

Mind posting a Mega.nz link or something? The site keeps crashing. I'm unable to access the download link.
