Thread: [Smart Email Extractor - Extract emails and attachments from files, IMAP, POP3 etc](#)

SIM-5525056 - June 27, 2024, 9:41 am

Hello everyone!

Today I will be making the release of my email address extractor public. I call it the Smart Email Extractor, the program is a command-line software used to speedily extract email addresses and attachments from files or folders, email accounts (through IMAP, POP3, MBOX, MailDir, or EML), WHOIS records, websites, and search engines. It is distributed as freeware.

This project is in progress so feel free to use, share and/or join the project development repository on GitHub at <https://github.com/BlovHackingServices/Smart-Email-Extractor>.

The current features of this program as part of version v0.0.1 are:

1. To extract email addresses from email accounts using IMAP.
2. To extract email attachments from email accounts using IMAP.

To download program releases, go to <https://github.com/BlovHackingServices/Smart-Email-Extractor/releases>
