Thread: [Get saved browser and WiFi Passwords in under 3sec to Discord!](#)

seeber - June 27, 2024, 9:50 am

Hello!

Today I'd like to share with you a project I've done for the Original Rubber Ducky (the new one will work just as fine) named Devil's Cupid v2.

I have done something like this in the past, but it only worked for passwords saved by Google Chrome.

What does this Rubber Ducky payload do?

This payload first of all looks for all stored Wi-Fi Networks on the machine. It fetches the network name (SSID) as well as it's corresponding password.

Then, it looks for stored browser passwords (Internet Explorer (Version 4.0 - 11.0), Mozilla Firefox (All Versions), Google Chrome, Safari, and Opera.)

Once all information is gathered (all this takes under 1 second), it sends all information to a Discord Server using a Webhook.

Everything is cleared and the script shows no signs of running at all. It easily bypasses Windows Defender.

Proof of concept

It was a very fun projects since I came back to Ducky Script development after a few years break.

wow sounds great let a see

codylegge - *October 28, 2024, 6:58 pm*

Hi, Can i try this? Would be cool to test it.

mickey21 - *October 30, 2024, 5:25 am*

La tienes en venta ?

ThermesK - *October 31, 2024, 7:11 pm*

Amazing, you could try
