Thread: [SMTP Setup + Warm-up Service For Unlimited Mailing - Send Link, Virus, Exploit Inbox](#)

SIM-5525056 - July 10, 2024, 6:37 pm

Hello,

You have found the right and honest unlimited SMTP setup + warmup service that suits all your needs either as an email marketer or email spammer. Before you start a contract, make sure you read through this post.

This SMTP setup + warm-up service is for those looking to send out emails to inboxes of various email providers. I will start by giving a very clear detail about SMTPs built on order. Most unlimited mailing SMTPs built on order leverage on VPS or dedicated servers. They are built on a single IP address and single domain. Most sellers may claim they provide multiple IPs whereas in reality your emails are routed through one IP address unless they are using PTMA or have configured their mail server to rotate IPs.

How to know if your SMTP server IPs are really on rotation, use a DNS record checker like [dnschecker.org](#) and check the A record of the SMTP server host. If it shows you the same IP address every time, then the SMTP server IP address is not on rotation.

With my experience over the years as system administrator, spammer, and programmer (amongst other titles). I can tell you that freshly built unlimited SMTPs are not best when thinking of sending emails to Gmail, Yahoo, Hotmail, Office365, and other big email service provider and this is due to the fact that the domain and IP address is fresh and has little or no reputation. Although, they work great when trying to inbox less secure webmail's. And over the years, I have been able to ascertain email providers where they work very great at and if you sort your email address using my Smart Email Sorter program here <https://hackforums.net/showthread.php?tid=6272003> then you can sieve the though guys from your email list and have a seamless and high converting inbox delivery. Be it link, virus, or exploit, you will certainly get good results.

That brings us to the essence of this post. What is the solution to making these bulk SMTP servers inbox Gmail, Yahoo, Hotmail, Office365, and other big email service provider? The answer is SMTP server warm-up.

I will be offering SMTP server warm-up and proper IP rotation service for my unlimited mailing SMTP server setup service here <https://hackforums.net/showthread.php?tid=6270989>. After warming up this SMTP server, you will be able to steadily inbox the above stated mail providers. Unlike other unlimited SMTP, ours has a flat setup fee of \$80 with single IP and is completely unlimited. I also offer multiple IP addresses for an extra affordable cost. We will save you money while providing you with a really effective solution and inbox guidance.

The cost of this SMTP warmup service is \$80 and extra IPs cost \$5 each. We also offer multiple domains if you want for SMTP rotation without any service charge. All you have to do is pay for the domain name only.

Note:

1. While contact us outside HF, please attach the thread link alongside your message.
2. All orders from HF will be done through start contract.

I look forward to hearing from you.

Thanks
