Thread: [Encrypter file](#)

Flantn - July 19, 2024, 5:47 am

I need my own encrypter. Can someone send me a guide in PDF or TXT format on how to code it and what I need to pay attention to?

There is more than one type of crypter. For example, scantime crypters and runtime crypters are two different creatures. Since you seem to be requesting a guide to program one yourself, I recommend starting with a scantime crypter, as it is easier to pull off (only protects the payload on disk).

Lots of work and practice await you. And lots of fun.

:~)

nodes has a number of free crypters that you can study. He's always looking to help beginning programmers learn C++. It should be obvious, but if you don't know C++, you'll need to learn it first.
