Update 2.2.1

1. Web version. Now you can log into the Web version of each account directly from the program. In the settings you can specify: create a new session or convert the current one. You also need to install the Chromium engine; installation is available directly from the program settings. Works only with http proxy.

2. Setting reactions to messages in chats and channel comments.

3. Working with Stories. Viewing, commenting, reactions.
4. Mobile phone number checker. We load a list of numbers - the output is usernames.
5. Parser "Similar channels"
6. Chat parser from the Comboto chat directory
7. In Profile Management it is now possible to create a group (previously it was only possible to create a channel)
8. The message editor has been redesigned. Formatting is now available, and you can also attach Emoji to messages.
9. Support for new media. Voice messages in .ogg format. Now you can select a group of media/files
10. In profile management, it is now possible to hide/show the account phone number in the profile.
11. Installation 2Fa Made in the "Profile Settings" menu
12. The program interface has changed slightly. Added multi-level menu.
13. Now the program itself downloads the current version of Telegram Portable when you start converting your account to TDADA. When starting for the first time, it is recommended to clear the home/portable - in this case, the .exe version will always be up to date.
14. Bugs fixed. Translation updated.
15. The program now weighs less and runs faster.

Yes, they range from 0.45 to \$1 depending on your task. E.g some numbers are better for Mass DM's than they are for Group Spamming.

Been using Tg cloud for a week and it works like a charm, really enjoying the mass dm tool; can be really effective if you input the right settings

Brox - December 15, 2024, 6:29 am

I was in the market for a reliable Telegram adbot after my previous one caused multiple account bans and frustration. I came across this software and decided to request a 24-hour free trial. From the start, the support was exceptional - every question I had was answered promptly.

After testing the adbot, I can confidently say it's the best one I've ever used. It performed flawlessly during the trial, so I decided to go ahead and purchase a 30-day subscription. So far, it's been absolutely worth it. The seller also provided me with high-quality accounts specifically for the adbot, and they've remained unbanned and fully functional.

If you're serious about advertising on Telegram, I highly recommend this software. It's efficient, reliable, and backed by outstanding support.

?Update 2.2.16?

- The program core has been updated to the latest version
- Added the ability to install proxies on accounts from the list
- The algorithm for leaving groups has been optimized
- Fixed a bug when filtering accounts by name
- The 2Fa installation algorithm has been improved, now multiple attempts are used
- Fixed a bug with 2fa, in which the password might not be saved in the general table, but only in the account json
- Incorrect passwords are now flagged in the database
- Fixed a bug in the group spammer when sending applications to closed groups
- Previously, the account could not wait for the application to be accepted and immediately tried to send a message, which led to an error

So, if I'm understanding correctly, you'll provide a dashboard or panel where users can create multiple Telegram accounts. These accounts will be used to post in various groups, directing clients to your Telegram group?

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
