Thread: [\[Backconnect Socks5 MaaS\] GhostSocks - Backconnect Proxy Management Solution](#)

ghostsocks - July 22, 2024, 11:00 am

Brief introduction - [Malpedia](#)

GhostSocks - allows users to turn "your" device network into a private, scalable and manageable SOCKS5 proxy network.

It is ideal for those looking for an efficient, secure and cost-effective solution for managing a large pool of "devices".

Why you need it? Easy to use module to your stealer or loader that allows to use machine's IP address when working with logs. Anti-fraud systems are much more easier to bypass with bot's IP address, you can easily cash-out paypal, banks, amazon etc.

Residential proxies are the most high valued proxies on market, the service API allows users to resell their proxies, so ever thought about making money with proxies - it's the right time!

Details: No External Servers Required: Forget about additional server costs and load balancing will ensure maximum stability of connections.

Maximum Stability: Proxies are stable thanks to frequent server pool updates.

Centralized Management: Manage devices and sub-accounts from a single dashboard.

Resident Proxy Purity: Proxies are raised on "your" devices - crystal clear for any anti-fraud systems.

Features: Easy setup

High speed and stability; Service does not limit proxy speed.

Ability to add sub-accounts; Great for those who install from different sources.

Excellent level of security and anonymity; The service keeps absolutely no logs regarding proxy usage.

Decentralized architecture; In case of crashes in data centers, domain blocking, etc - "proxy servers" will always be able to find free and available to connect resources.

API: Ability to add/remove socks5 login/password, upload proxies by geo and more. Suitable for integration with other projects, including proxy shops.

Technical part Builds are available in x32 WIN EXE and DLL / x32 UNIX Executable formats.

The language used is Go "native". Build weight: up to 3mb before obfuscation and up to 8mb after.

All connected machines support several commands: Kill, Restart, Blacklist.

Builds will not work in case of:

1. running a non-crypto build
2. Running on machine with CIS IP

Price per month:

100\$ -> Limit 400 ONLINE proxies

200\$ -> Limit 1000 ONLINE proxies

300\$ -> Limit 2500 ONLINE proxies

400\$ -> Limit 5000 ONLINE proxies
