Thread: [Latest Trends in Ethical Hacking for 2024](#)

whoami888 - August 3, 2024, 12:48 pm

Hey everyone,

With 2024 upon us, the field of ethical hacking continues to evolve rapidly. I wanted to open a discussion about the latest trends and techniques that are making waves in the cybersecurity landscape this year.

Here are a few topics I'd love to hear your thoughts on:

AI and Machine Learning: How are advancements in AI and machine learning influencing ethical hacking practices? Are there any new tools or methodologies that are leveraging these technologies?

Zero Trust Architecture: With more organizations adopting Zero Trust models, how are ethical hackers adapting their approaches to test these systems effectively?

New Vulnerabilities and Exploits: What are some of the most significant vulnerabilities or exploits that have been discovered recently? How should ethical hackers prepare to address these?

Training and Certification: What are the most valuable certifications or training programs for ethical hackers in 2024? Are there any new or emerging credentials that are gaining importance?

Feel free to share your insights, experiences, or any resources you've found useful. Looking forward to a great discussion and learning from the community's collective expertise!

whoami.
