Thread: [Fine tuning PrivateGPT](#)

**HOMODIN** - August 7, 2024, 1:40 am

I have been playing around with PrivateGPT a fair bit and I do have to say that it's all fun n good. I can make it so that it "imitates" various characters based on tons of speech (text) data but what I don't know is how to feed it tons of "how to" guides and make it learn from those. I have a bunch of step-by-step txt and pdf files (sure, I can convert all text in to what ever is needed) that I would like to feed to my PrivateGPT but yeah, no clue how to so I just wanted to see and ask if anyone here knows how to do that and perhaps share some thoughts and hints?
