USDT TRC20 would be a better choice. But gambling is a swamp, remember, you are more likely to lose the money you have in gambling. Neither is crypto.

Use what you won to invest into education so you can repeat the process without gambling in the long run.

You should flip that 1 eth to 2 eth, then 4 eth, then 8 eth and just keep going!

It is one of the most logical comments on the subject. The money from gambling is imaginary money. If you don't spend it, you will go gambling again and lose.

Cash out and never come back because remember, you always end with nothing.
