Thread: [Beginner questions \(need answers\)](#)

zipxyy - August 11, 2024, 11:38 am

Hello, im trying to start preparing to make a rat and spread it trough various methods, but i have several questions, which i'd be delighthed, if they were answered to.

- 1) what are the actual advantages to a paid rat vs free/open source rat?
- 2) How difficult is it, for the authorities to back track to me, considering i would stay away from banking information and such govermental info, that could easily be tracked. Meaning only accounts for services, crypto and malware to mine crypto for me.
 - 3.1) Going trough the fuss of doing absolutely everything yourself seems hard and even risky as a beginner, so is it better to simply buy a service which includes a RDP, rat, FUD crypted all in one?
 - 3.2) Is there anybody, that i could truly trust, that offers such services. I've been PM'd by one member here, but with no real background or anything that i could actually trust him on, it could easily be a scam. So, does anybody know somebody who offers such a service that is known amongst HF.
- 4) If i wanted to make youtube videos in order to get downloads, would putting a link to download the rat in the youtube videos description end badly? (fake emails, new accounts all that)
- 5) anything else really important that a beginner might not realize?

Hope somebody is helpful and wisdomful enough to help!

You uh... you're not allowed to do that... It's illegal... (And I think against forum rules too)

globalroot - August 11, 2024, 5:42 pm

1. That depends on the features and stability. Most of paid rats are garbage, but Orcus is source leaked and still better than all of them.
2. If you use a tunnel, or your own pc, its pretty easy.
- 3.1. Yes.
- 3.2. For RAT, you shall use orcus. For crypt, I would recommend @v8rvb on Telegram. For VPS, I would recommend ZServers.
4. Could be, YouTube can remove links from descriptions.

Coding a RAT is against forum rules? Since when?

(Aug 11, 2024 05:42 PM)globalroot Wrote: [\[CITE\]](#) 1. That depends on the features and stability. Most of paid rats are garbage, but Orcus is source leaked and still better than all of them.

It's important to remember that the creator of Orcus got slammed in the slammer.

"Coding a RAT is against forum rules? Since when?"

Yeah my bad, I looked at the rules earlier and forgot to come back.

3) A VPS / cloud VM will not include a RAT and crypter or vice versa.

4) Yes, the YouTube police are notorious for sussing out malicious links and keeping you banned.

zipxyy - August 12, 2024, 10:01 am

4) Yes, the YouTube police are notorious for sussing out malicious links and keeping you banned. Rather talking about separate services, which include a full set up done for you, the service itself includes the ones mentioned above.

(Aug 11, 2024 05:42 PM)globalroot Wrote: [\[CITE\]](#) 1. That depends on the features and stability. Most of paid rats are garbage, but Orcus is source leaked and still better than all of them.

2. What is a tunnel, sorry i'm no specialist. and secondly, how do i avoid using my own pc. Would someone typically get a whole new pc for that? or should i keep everything on a virtual machine.. what's the solution

(Aug 11, 2024 07:59 PM)DramaKing Wrote: [\[CITE\]](#) 3) A VPS / cloud VM will not include a RAT and crypter or vice versa.

4) Yes, the YouTube police are notorious for sussing out malicious links and keeping you banned.

4) the worst that will happen is simply account removal/suspension though right

2. Tunnel, like ngrok, playit. That redirects the traffic to your localhost. You should buy a VPS.

Okay, so... if i understood correctly, simply to use a server hosting and probably have it connected to a vpn or something along the lines of that yes. like the very typical way to host a rat. like ZServers and simply own a paid vpn.
