Thread: [sharing, sharing, sharing....](#)

SovietBastard - August 19, 2024, 6:35 am

we need to increase contribution and sharing, im trying to do my part, but i don't see anyone sharing code or other side projects, what's going on? do we want to share something? i can't contribute and share by myself, we need people to contribute and SHARE, i will keep contributing and sharing what i can to help grow up this forum a little bit, the forum looks very empty... content is very poor, and people do not share, cmon, let's try do better... asking questions like "what's your next language" is ok, but not okay if it is the only type of question you see...

dobroy_000 - August 19, 2024, 6:42 am

hi my friend, i would share, but i don't know how to code :)

Bastille - August 19, 2024, 6:51 am

Not a coder .. :(

I'm planning to improve my skills in coding tho (targeting Python, PS, Bash, C and ASM), I guess that they are the most useful in cybersecurity

I like the ideology of sharing, I have lot of contributions in the white hat section (I'm more familiar with this field)

Hope to be active there with you soon !

Nice! Do you plan on improving all at the same time?? Never really tried that, is it efficient?

I will probably learn Python, Bash and PS at the same time as I'm a little bit familiar with it already, besides I often have opportunities to work with them on small projects.

However I'll dedicate time to learn C, the objective is to create small programs and malware (still related to cybersecurity, to know how they work), then I'll dedicate another moment to learn ASM (x86). I think that C and ASM requires more time and investment than Python, Bash and PS, they seem more complex.

they are heavier, but no, im not really into WH hacking, im a professional programmer and cryptographer, not really into white hat stuff

2 be honest, i kind of think there are not many coders here, i dont see code

ttbr0 - August 19, 2024, 7:53 am

what would you like to see? most of my code is for offensive development which i wont share here or incredibly niche and complex for personal projects which wont be useful for anyone else.

everything possible, why do you say "wont be useful for anyone else"? internet and hacking forums are supposed to share knowledge, that's the reason im sharing, i know what you say, we all have complex projects and code that we wont share, you think i shared my personal shit? of course not, but this doesnt mean im not able to spend 20 minutes writing something cool for newbies, we need to CONTRIBUTE and SHARE

LOL, wtf does that mean? your code is for offensive dev? OP is trying to bring more people to share, your comment does not help in any way

nice, you are now on the top 10 list of the FBI hahaha ,just kidding, well if you really that advanced, did you ever hacked into something? i've heard about big name hackers like intelBroker for example

on breachforums, he is the real thing, but he does it for real, did you ever did something like that? hack into gov? hack into big corps? im just curious... i like to see big hackers around

no, im not foolish enough to break the law, nor am i an operator. imo hackers that run around shouting to the world that they are hot shit yap too much and are cringe. its wise to keep your mouth shut and keep to yourself to avoid unwanted attention.

but you said you code malware, offensive code, etc... that's kind of illegal... i have my Bachelor of Civil Law and i know that what you're doing can actually put you at fresh for long depending on your location... haha, just saying, i kind of admire those guys, elite hackers who drive luxury cars without care, they kind of have balls to do that, despite the fact it's illegal, at least they know how to do it right?

WHAT? did you just called intelBroker cringe? i will report this to him, i know him very well, very very well...
