Thread: [i need help decrypting a hash](#)

arondg15 - August 19, 2024, 7:26 pm

i found a website which had a sql vulnerability and i found this hash "e742c63f03ab602f2b38433ffc28b5145ba1332d" tied to admin
i think it is sha-1 and i have tried john and hashcat but neither of them worked
can anyone help me?

thank you so much

how did you decrypt it?

i am still new and learning and if you could teach me or just tell me the way you did it that would be amazing

First of all, hashes are not a form of encryption and cannot be decrypted or reversed. What I did was do a lookup for the hash on hashes.com. It's a better source than, say, rockyou.txt.
