Thread: [\[BOTNET\] JINXLOADER | STABLE | PERSISTENT | NATIVE | GOLANG | \\$60 | VOUCH COPIES](#)

Delfin - August 25, 2024, 8:57 am

This thread has been moved to <https://hackforums.net/showthread.php?pid=62478836>
You may purchase it from the new thread. This thread will be closed.

Old Thread ([Click to View](#))

Note: Ethereum is no longer an accepted cryptocurrency.

I have recently acquired the full source to JinxLoader from the original developer. I have been given permission to use the branding, as well as the graphics used in the original seller's thread. I fully intend to continue development and sales. I would like to clarify, however, that I have no relation to the previous developer.

Here is a screenshot of the current runtime result of the new payload that is being worked on. It includes full support for Windows 7 all the way to Windows 11, advanced anti-analysis functionality, a small payload (approximately 250kb), fallback domains, etc.

JinxLoader is a loader with a focus on being a cost effective, stylish solution to provide a fresh, simplistic tool to store large numbers of bots, and manage them effectively. Its native backend allows for a faster processing time compared to other non-native solutions, and its simple to use task system means that it's incredibly simple to handle bots and create specific tasks.

Vouches

There are currently no vouches.

There are 2/2 vouch copies available for trusted members.

If you are interested, please reach out to me.

Q. What is a 'Loader'?

A. A loader is a style of malware designed to remain silently on a system and await instructions to download and execute other malware. It is designed to hold thousands of bots.

Q. What commands does JinxLoader offer?

A. JinxLoader offers users the ability to execute programs, install them to persistence, execute programs and then remove itself, and execute PowerShell.

Q. What platforms does JinxLoader support?

A. The JinxLoader client supports Windows 10 & 11. The C2 can be executed on a Linux or Windows 10/11 system.

Q. What if my license key runs out?

A. Once your license expires, you can contact me to purchase a renewal.

Q. If my license expires, do I lose my clients?

A. No, as your clients aren't tied to your license. You can purchase a renewal and regain access to your clients.

Q. Is the client FUD?

A. No, the client is not FUD. At the moment, the client lacks built in persistence, and a crypter is recommended for use. I will look into creating a stub with persistence if there is demand for it.

Q. I was a previous buyer of JinxLoader. Will I be able to receive free updates?

A. No, I'm afraid. I have no access to the previous list of buyers. You must re-purchase JinxLoader to continue receiving updates.

Terms of ServiceAny attempt to reverse engineer any of the provided binaries will lead to an instant blacklist, alongside anything else I deem appropriate.

Any scans on virus distributions sites (VirusTotal, HybridAnalysis, etc) are absolutely prohibited.

I am a human, so you must be understanding of any delays within support or replies. I will try to be active as soon as I can, but there will be times I am unavailable.

There will be no refunds given after you have purchased the software. There are various license lengths, buy only what you will need.

This thread is for enquiries about the product, not for support. Please contact me directly for support. My contact details are in my signature.

These terms are subject to change at any time, so make sure to check in once in a while to get updated information.

Features

C2:The C2 is compatible with both Windows and Linux systems.

The C2 is built to handle a large amount of connections at once while being extremely stable.

The C2 offers a stylish UI which makes managing your bots exceptionally easy.

There is a Telegram bot integrated which allows you to see tasks wherever you are.

Client: There is an x86 and a x64 version of the client included in each build.

The client is written in Golang, which is a native language. This means it has wide crypter compatibility.

The client is capable of running on Windows 10 and 11 systems.

The client BIN has a size of approximately 5MB.

The client supports fallback domains to prevent take-downs.

Pricing

1 Month - \$60

1 Year - \$120

Lifetime - \$200

You may up to have three free domains in your client. Any more domains will incur an extra charge of \$10.

Rebuilds will be free for the next few weeks/months to account for any possible bugs.

Contact Details

My Telegram account was terminated a few minutes ago. Contact me through XMPP, qTox or through HF for the time being.

Rendza was nice enough to make a group with there @ and put the official buyers names on there @Rendza

Can confirm this is other buyer <3

PureCoder - August 26, 2024, 7:09 am

It's great to see this product back on the market with a new seller & It looks solid

Best of luck with the sales

Thanks PureCoder, wasn't expecting you to reply haha

Your BlueLoader was the first loader product I saw, and I've been interesting in making something like it since
Thanks ^.^

Sand Ferret - *August 28, 2024, 3:18 pm*

Best of luck with this.

I had a good relationship with the previous seller and helped him out with a few things related to JinxLoader.

Great project.
