?[NEW] Steam Phisher - A Highly Advanced FUD Credential Harvesting Tool?

Steam Phisher is a sophisticated, professional-grade phishing tool meticulously designed to simulate the Steam login interface with absolute precision. With its powerful feature set, Steam Phisher enables you to harvest Steam credentials securely and discreetly, all while staying under the radar of antivirus solutions like Windows Defender.

? How Does it Work?

Steam Phisher is packed with advanced features that set it apart from the competition:
Perfect Steam Login Replica: Our tool replicates the Steam login interface down to the last pixel, making it nearly impossible for your targets to spot any difference.

Fully Undetectable (FUD): Steam Phisher is engineered to bypass all major antivirus solutions, including Windows Defender, ensuring that your phishing operations remain undetected.

AES-256 Encryption: Captured credentials are encrypted using military-grade AES-256 encryption before being stored or transmitted, ensuring the utmost security.

Advanced SFTP Integration: Steam Phisher seamlessly integrates with SFTP using the popular pscp utility, allowing for automated, secure uploads of encrypted credentials to your server.

Customizable Builds: Our intuitive BuilderForm interface allows you to customize every aspect of your phishing executable. Configure paths, set up SFTP details, and generate encryption keys with just a few clicks.

Dynamic Logging System: Keep track of every operation with detailed logs that record login attempts, encryption processes, and SFTP transfers, giving you full control and visibility over your phishing campaigns.

Auto-Assembly Resolution: Our OnResolveAssembly function dynamically loads necessary DLLs from the Data folder, ensuring smooth operation and minimizing detection risks.

User-Friendly UI: Steam Phisher features a modern, intuitive user interface that makes setup and operation simple, even for users with minimal technical experience.

Error-Free Password Handling: SFTP passwords are automatically checked and sanitized to remove special characters, ensuring compatibility and secure connections.

Seamless Credential Capture: The tool not only captures the credentials but also ensures they are securely encrypted and ready for secure transmission, making your operations smooth and efficient.

? Pricing

We're offering this powerful tool at highly competitive prices:

Prebuilt Version: \$150 per build
Source Code: \$750 for full access

Payments are only accepted via Monero (XMR) to ensure the utmost anonymity and security for both parties.

? Why Choose Steam Phisher?

Here's why Steam Phisher is the ultimate choice for professional red-teamers and penetration testers:

Unmatched Stealth: With FUD capabilities, your phishing campaigns remain undetectable by Windows Defender and other antivirus software.

Ease of Use: Despite its advanced features, Steam Phisher is incredibly user-friendly, requiring minimal setup and configuration.

Versatile Customization: Whether you need to tailor the executable to a specific target or ensure maximum security during credential capture, Steam Phisher offers the customization options you need.

High Security Standards: All captured data is encrypted with AES-256 before storage or transmission, ensuring that your valuable data is protected at every stage.

Seamless Integration: The tool's advanced SFTP functionality allows for secure, automated uploads of captured credentials, making data exfiltration a breeze.

Professional Support: We offer prompt and professional support to help you get the most out of your purchase.

Proven Reliability: Steam Phisher has been tested and proven in numerous scenarios, ensuring it delivers reliable results every time.

Decryption

? How to Get It?

If you're ready to elevate your phishing campaigns with Steam Phisher, simply send us a message or reply to this thread. Once payment is confirmed, you'll receive your build or the source code promptly.

Note: This tool is intended strictly for ethical hacking and authorized red-teaming activities. Please use responsibly!

Don't miss out on the opportunity to own this powerful, fully undetectable tool!

Happy phishing! ?
