Thread: [I want to Make my BTC untraceable Before Cash out!](#)

LegendBTC - August 26, 2024, 7:22 pm

Hello Guys,

How to cash out my BTC with Binance. but before that i wanna make my BTC untraceable. What steps should take..

I got scammed previously doing Coin Mixing. If there are any some trust Coin mixing service you wanna recommend?

Or is a Good idea to convert BTC to ETH then again back to BTC.. Recommend me some trust worthy websites!

Whats your overall advice!

Truth - August 27, 2024, 3:13 am

cheapest is just to swap it to BCH and use cash fusion then swap back

Blockonome - August 27, 2024, 5:10 am

You could also turn it into Eth and then you Cash Tornado to make it untraceable.

DRSHELL9 - August 27, 2024, 5:35 am

Rather just know I am safe and do KYC to SimpleSwap(XMR) then XMR to whatever you want.

Yes it is simpleswap.io sorry I thought most people knew this already haha.

Mewtwo - August 27, 2024, 9:06 am

Your best and easiest way is just converting it to Monero. BUT don't instantly go from BTC->XMR->BTC. Go like: BTC>xmr>xmr wallet #2>wait a few days > send a few xmr to 1 addy for BTC > send a few more etc

Make sure to have the whole Monero blockchain downloaded too
Don't use public nodes

Omniscient - August 27, 2024, 3:21 pm

Be aware that making your BTC "untraceable" is itself a red-flag for any KYC exchange you deal with.

Envy - August 28, 2024, 12:32 pm

Best you can do is wash it through a few addresses and convert it to XMR as already suggested.

Nothing is ever really truly "untraceable", especially if it's originating from a centralized exchange.

What is cash tornado or how what do you mean?

BlackWidow1 - September 15, 2024, 5:34 pm

Bitcoins are already on binance if verification is not in your name, you can make the chain untraceable. Write me in private on a specific request, what you want to get as an output, in what currency and with what aml ratio.

F4tDoinkz - September 15, 2024, 6:02 pm

Convert it to XMR and then in the future for activities needing anonymity, use it from the start.

ArtSeries - September 28, 2024, 5:00 am

alot of people are sugggesting simpleswap.io

Dont do it

Look at the reviews in trustpilot alot of people got their funds frozen

Then, which swapping platform you recommend??? which you personally use?

Vlad_3408 - October 9, 2024, 5:32 pm

Greetings,

in addition to my wallet I'm using a Anonymity - software that I found on a crypto forum. That post read:

"Security and privacy have become increasingly important in crypto trading. Anonymity Creator Pro offers secure and anonymous transfer of cryptocurrencies such as Bitcoin. It implements a version of TOR's network solution and transfers your crypto transactions through this network - while other web-apps (browsers, etc.) continue to use your usual connection. It has a simple interface, but can be configured for varying degrees of privacy. The compressed file contains an installer file, allowing the user to customize their installation (the entire program is included in the zip file). Installation instructions and Quick Start documents are also included. Anonymity Creator Pro is not an ordinary wallet - but a supplement that works together with most wallets to improve security and guarantee privacy in monetary transactions."

The funnest part is almost watching Blockchain Explorers try to track the transaction...

Anonymity Creator Pro can be downloaded for free from:

[deleted]

You can probably also find it at torrent-sites (just be sure that it is the full version v. 1.5)

Stay safe

Mooooookie - October 9, 2024, 6:21 pm

Exchange the coins on a website that has a currency exchange.. plenty of them around.

wyxxlk - October 11, 2024, 11:30 am

convert to xmr, search no kyc exhchanges on kycnotme or something like that, send it around monero network between your wallets (fees are real small, like 2-4 cents or something like that), then either swap directly to btc or ltc->btc, then go to some site like agoradesk or just any localbitcoins alternative and sell it there however you want

Ascendancy - October 11, 2024, 11:44 am

BTC -> No KYC exchange (BTC to XMR) -> Monero Wallet 1 on PC (Send XMR) IMPORTANT THIS ISN'T A SUB ADDRESS IN WALLET 1, SEND TO COMPLETELY NEW WALLET ALSO MAKE SURE THE NODE IS YOUR OWN OR TOR HOSTED -> Monero Wallet 2 on PC (Send XMR) -> No KYC exchange (XMR to BTC) -> BTC Wallet on PC -> LocalCoinSwap (BTC to Cash P2P)

Could even skip sending it to the 2nd No KYC exchange but if you want to be safer.. Do it.

Regulus - *October 11, 2024, 11:56 am*

Just send it to my wallet instead.
