Thread: [JINXLOADER V3 | STABLE | NATIVE | x64/x86 | LOADER BOTNET | \\$60](#)

Delfin - August 31, 2024, 12:18 am

Apologies for my recent inactivity, various personal issues restricting me from accessing and interacting with this place. I will update this thread with updated info regarding JL soon. Don't purchase at the moment, please.

Frequently Asked Questions [\(Click to View\)](#)

1) What is a loader?

A loader is a type of botnet designed to remain undetected on a system and receive commands to deploy further payloads, such as miners. It is meant to be capable of holding thousands of clients at once. You can think of it as a very minimal RAT.

2) What functionality does JinxLoader offer?

JinxLoader offers users the ability to drop payloads to disk, run PowerShell in memory, inject .NET assemblies in memory, and remove itself from the system.

3) What happens once my license runs out?

A. Once your license expires, you lose the ability to access the C2. This does not mean you lose your bots, and you can purchase another license to regain access.

4) Is the client FUD?

A. The client is not FUD. A crypter is strongly recommended. The stub will however be cleaned periodically to make crypting easier.

5) How can I crypt the payload?

A. There are various crypters on the market which will support JinxLoader. I cannot recommend any myself. Do note, however, that the client utilises TLS, which some crypters aren't capable of handling.

Screenshots [\(Click to View\)](#)

Features [\(Click to View\)](#)

The C2 panel is compatible with both Windows and Linux systems, and can be set up in just a couple of clicks.

The C2 is built to handle a large amount of connections at once while being extremely stable. The C2 offers a stylish UI which makes managing your bots exceptionally easy.

The client is a native Nim executable, and supports x86 and x64 output.

The client drops no files to disk.

The client has been tested on Windows 8 x86 to Windows 11 x64.

The client is approximately 240kb.

The client supports multiple fallback domains to prevent botnet takedowns.

The client does not automatically elevate, nor does it require elevation to operate.

The client has a robust anti-analysis system to prevent your domains from being flagged.

Vouches ([Click to View](#))

There are currently no vouches for JinxLoader v3.

2/2 vouch copies remaining (100 rep users only)

Terms of ServiceAny attempt to reverse engineer any of the provided binaries will lead to an instant blacklist, alongside anything else I deem appropriate.

Any scans on virus distribution websites (VirusTotal, HybridAnalysis, etc) are absolutely prohibited.

I am a human, so you must be understanding of any delays within support or replies. I will try to be active as soon as I can, but there will be times at which I am unavailable.

There will be no refunds given upon purchase. There are various license lengths, so buy only what you need.

Resale of license keys is not permitted, and anyone caught selling their license key will have it blacklisted. (Giveaways are allowed)

This thread is for inquiries about the product, not for support. Please contact me directly for support.

These terms are subject to change at any time, so make sure to check in once in a while to get updated information.

Pricing

1 Month - \$60

1 Year - \$120

Lifetime - \$200

You may have up to three domains in your client. Any extra domains will incur a charge of \$5 per domain.

Rebuilds will cost \$20, but the fee will likely be waived until any bugs have been found and reported.

Looks promising! i'll gladly take a vouch copy if still available, GLWS!

Delfin - August 31, 2024, 12:32 am

(Aug 31, 2024 12:30 AM)CHAOS Wrote: [\[CITE\]](#) Looks promising! i'll gladly take a vouch copy if still available, GLWS!

Sounds good, I'll start a contract with you!

brizy007 - August 31, 2024, 6:45 am

awesome toll and a great guy i have purchased this product and so far so good it works as advertised.

We be looking forward to what the future holds

Sticky Bot - August 31, 2024, 12:00 pm

Hi, I'm Sticky Bot. The owner of this thread has purchased a Paid Sticky. Hack Forums does not get involved in deals or deal disputes. We do not vouch for the product or the service offered by members. Please note that all deals are at your own risk. The sticky will expire on Sep 7, 2024. If you or a loved one are interested in buying a sticky please visit this page: [Buy Sticky](#). For more information about Paid Stickies you can read our [Help Doc](#).

Stanley - September 1, 2024, 12:53 am

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

OSVapor - September 2, 2024, 5:49 pm

Really interested in this, Would be nice if there was botkilling functionality.

Delfin - September 2, 2024, 10:52 pm

(Sep 2, 2024 05:49 PM)OSVapor Wrote: [\[CITE\]](#) Really interested in this, Would be nice if there was botkilling functionality.

Yeah right now I'm working on improving the stability of the new stub, and then I'll look into new features.

The issue with the botkiller is that it would somehow have to differentiate JL from other bots, which can be difficult since a crypter is needed to use JL.

If someone uses a crypter with weak persistence to load JinxLoader, chances are that they'll lose the client.

If you're interested, I can do a 3-day vouch copy. However, I'm having issues with compiling the C2 for Linux (Go compiler being weird) so can't do it for Linux at the moment. Start a contract if you're interested in testing it out

BPName - September 3, 2024, 3:02 am
with hosting or without?

Delfin - September 3, 2024, 8:52 am
(Sep 3, 2024 03:02 AM)BPName Wrote: [\[CITE\]](#) with hosting or without?
Without, you host on your own vps or rdp

Compilation of the C2 for Linux is functional once again

bambobimpe1 - September 4, 2024, 7:17 pm
This looks good .. can i get a vouch copy ,lets see how stable it is.

Delfin - September 5, 2024, 8:34 am
(Sep 4, 2024 07:17 PM)bambobimpe1 Wrote: [\[CITE\]](#) This looks good .. can i get a vouch copy ,lets see how stable it is.
Sure, start a contract and I'll give you a 3 day vouch copy.
Just let me know your preferred C2 OS, domain/ip and port

Delfin - September 11, 2024, 5:35 am
I have taken the decision to go back to supporting the Go version of the client rather than working on a Nim-based one. This is for various reasons, but mainly because I'm not happy with Nim's various quirks and flaws which are impacting stability and performance. Updates will be released for the Go client, but the Nim client will still be included in builds to satisfy users' needs.

CHAOS - September 12, 2024, 12:32 am
Had the opportunity to test Delfin's loader and it works as intended, stable no bugs and beautiful ui. OP even helped me running it on Linux, very nice guy and always down to help, couldn't ask for better support honestly.

Overall i give this product a 10/10 i'm sure this will go a long way, GLWS!

retrurs2000 - September 12, 2024, 7:13 am
Hi i bought from you old months ago but you disappear

Delfin - September 12, 2024, 8:35 am
(Sep 12, 2024 07:13 AM)retrurs2000 Wrote: [\[CITE\]](#) Hi i bought from you old months ago but you disappear
I'm afraid not, you bought from Ren, the previous developer. I bought the source recently. Ren no longer develops or maintains JL. If you want to receive updates, you need to repurchase JL.

pompiszon - September 13, 2024, 10:30 am
nice one, i will try this my brother, have fun :D

Delfin - September 15, 2024, 7:10 am

There is a 25% discount on for all packages (month, year and lifetime) when you purchase through Sellix. Code is: WagDQKyPtZIYzqiB - Expires in one week

BrothaMike - September 20, 2024, 4:49 pm

Hey are you still giving out vouch copies? I would write you a full review if I could get one.

Yeah sure, I can provide one. Contact me over convo, I'll give a 7d key

No7r4c3s - September 21, 2024, 9:14 am

Looks awesome, love the simplicity to it, as im not a fan of Loaders with to many options/features! Also, for the price, if this is stable with a large client/connections loading and can hold it's weight I will hopefully be getting soon as I can, even to test this out! Also, if you are interested in working with someone or need any type of help, assistance, I have quite some free time on my hands recently and would definitely be down to write some code for any portion of this, and not in it for money, just been around the block and worked on a number of older (I am old now, first acct on HF was 2009 back when I was coding Nemesis Crypter in which ended up being sold over to a member on here by 'pr3fix') but that was a very long lasting, stable FUD polymorphic crypter more then 10 years ago, I did a good number of modules for Quasar RAT on github as well, never in it for the money, always safe secure, and the folks that know me could tell you my reputation meets with all of this! Just a thought if you ever wanted to collab I love working on or helping people, I have my own stuff in the works, almost done and im going to be seriously free, if you want to talk more contact me and maybe I could put something together for you and see how you like it etc... I'll be keeping tabs on this as I'm tempted to purchase right now but I can't see myself waiting no longer than a week to purchase! As always GLWS, hope the best and see this make it's way to the top!

Delfin - September 21, 2024, 9:57 am

As always GLWS, hope the best and see this make it's way to the top!

Glad to hear that you're a fan of this project. I usually work alone, but if I'm ever looking for any help or am interested in collabing, I'll keep you in mind :D

Also glad to hear that you're interested in purchasing, just make sure to read mentioned details (W10/W11 tested only, 5MB bin, non-FUD, etc) before purchasing so you aren't disappointed

As far as I've tested, it's stable and able to maintain a large amount of connections

Thanks, and good luck with your own products <3

BrothaMike - September 22, 2024, 1:37 pm

I got a copy of this beautiful loader by Delfin (JinxLoader) and I must say the UI is amazing. Reminded me of League Of Legends haha. When I first loaded it up on my VPS, I was amazed how I did not even need Mysql and uses SQLITE. It is a console that runs a web interface so you can access it thru your web browser! Honestly this loader is reliable and has no bugs what so ever. However I did have a bit of confusion how to get it setup at first but with Delfin's support I got it running in a matter of minutes.

I also love the telegram bot that it has, very easy to configure and to add your loader onto telegram. One of the best loaders I've seen in a while if I am being honest.

standersxter - September 23, 2024, 11:30 pm

is this better or blue loader? stuck between these two not sure which to buy.

Delfin - September 24, 2024, 8:57 am

(Sep 23, 2024 11:30 PM)standersxter Wrote: [\[CITE\]](#) is this better or blue loader? stuck between these two not sure which to buy.

Both offer very similar services, but BlueLoader is a more established loader. I think JinxLoader is cheaper at lifetime, but can't confirm.

BlueLoader is .NET, whereas JinxLoader is written in a native language (Go)

JinxLoader client is 5MB, BlueLoader will be considerably smaller as it's in .NET

JinxLoader is less mature at this stage, so offers less features (lacks a botkiller & DDOS functionality, latter likely won't be implemented for a while if ever, former is being debated)

JinxLoader C2 is a web page, whereas Blue Loader is a GUI. The web page is better IMO as you can access it from anywhere you want. (Jinx also offers a Telegram bot, but it's limited in features as it isn't really a popular feature)

Both provide a stable loader that is easy to set-up and use. Honestly, it's entirely up to you which one you choose.

I'd recommend maybe buying like the 1-month package of JinxLoader and BlueLoader and comparing them, and seeing which one suits you better? (If that's a viable option, of course)

m3srine - October 1, 2024, 4:32 pm

Q. What commands does JinxLoader offer?

A. JinxLoader offers users the ability to execute programs, remove itself, and execute PowerShell commands.

Is execute programs also done in memory ??

Delfin - October 2, 2024, 8:43 am

(Oct 1, 2024 04:32 PM)m3srine Wrote: [\[CITE\]](#) Q. What commands does JinxLoader offer?

A. JinxLoader offers users the ability to execute programs, remove itself, and execute PowerShell commands.

Is execute programs also done in memory ??

Not at the moment, no. Programs are dropped to disk and executed. I'm looking into implementing a process hollowing method for execution but currently busy with other private projects.

Delfin - October 16, 2024, 10:24 am

Small Update to the C2

- Implemented "Username" field to help in distinguishing bots, all other features remain the same at the moment.

Removed Useless Components

- The Nim experimental client has been removed - it is just not stable enough.

- The stager has been removed as it was poorly written and offered no real value.

Palac10 - November 6, 2024, 5:41 am

Any ETA for the implementation of process hallowing?

Delfin - November 6, 2024, 8:52 am

(Nov 6, 2024 06:41 AM)Palac10 Wrote: [\[CITE\]](#) Any ETA for the implementation of process hallowing?

Read thread, decided to take it off sale and privatize it

BPName - November 9, 2024, 11:28 pm

wit hosting or witout hosting?

Delfin - November 9, 2024, 11:39 pm

(Nov 10, 2024 12:28 AM)BPName Wrote: [\[CITE\]](#) wit hosting or witout hosting?

Without, currently off-sale, read top of thread.

Delfin - November 24, 2024, 12:37 pm

Released v3, includes many new things: entirely new stub, improved C2 stability and performance, new client info (client architecture & integrity), ability to inject .NET assemblies in memory, much smaller stub (240kb) and much more.

Use coupon VERSION3 for 25% discount on all license lengths!

hoangdoan - March 24, 2025, 1:52 am

hey, still available bro?

kopfness22 - May 21, 2025, 11:50 am

Is it possible to self host?

thelowestbid - June 24, 2025, 6:42 am

over a month since the thread update, [Delfin](#) are you dead or what? interested but not getting a great view of your product here

omelrobles - December 9, 2025, 1:10 am

I made the payment, he said he would arrive at his house in 10 minutes and never answered again.
