Thread: [I want a keylogger that will capture the victim's browser Windows passwords and websi](#)

RamoszYumeKana - September 6, 2024, 8:04 pm

Good evening, I want a keylogger that can be placed in the root of the Pen-Drive and when it is clicked on the victim's PC, it can create a notepad inside the Pen-drive and copy all the passwords and information from their conversations and also copy all the websites they visited ???? Does anyone know how to do this can you teach me how to do this????

This is how keyloggers work, none of which involve "creating a notepad."

Try using a Rubber Ducky. You insert it into the USB slot of the target system. It registers as a keyboard and is used to generate keyboard input (keystrokes) on the target system, which can then be leveraged to carry out malicious tasks.

:)

So, my friend, I want to use Rubber Ducky, but there's just one thing. Do you know how to program Rubber Ducky so that when I use it, Rubber Ducky on a pen drive and click on the victim's PC, and it automatically sends copies of the saved passwords and the websites that the victim accessed and sends everything to my email? Do you know how I do this? How to program a Rubber Ducky for a pen drive and do this? Friend, how do I do this? Please show me how to do the procedure within the program, modifying it so that it sends me everything to my email?

Naaaaah, I'm afraid that would be getting a bit too involved in another person's possibly illegal activities. The tool comes with basic docs, so you should practice using it yourself to fully appreciate the learning experience. ?

Good luck!

Friend, where can I download these basic documents that you mentioned to learn more about Rubber Ducky? Where do I start???? Please send me a video lesson here that teaches me about Rubber Ducky, the beginning of how to download and open it and modify and change within it so that it sends me the information to my email!!!! Is it possible to send me a video lesson here that teaches me step by step???? Please????

Friend, this site is about hacking and I'm here to learn everything and I'm thirsty for knowledge. If you have video lessons that teach from the beginning, please send them here. It's for me because I want to learn everything, especially about Rubber Ducky, the beginning of it, the basics of how to open the program and modify it so that it copies all the information from a PC and send it to my email, because I've already seen a video where the guy does this, so the video has cuts.

The QuickCreds payload will decrypt passwords and save them to the Rubber Ducky, that is, if the user was so nice as to disable the antivirus. Sorry, adding email exfiltration would be highly advanced.
