Thread: [Scraping tool for business contact details](#)

pepperpeppow - September 8, 2024, 11:35 am

Is there an tool that I can use that scrape business contact details? Like i could enter the business name and it will provide me with a emailadress or phone number, or if I enter a market type such as real estate, it will provide me with a list with busiensses and their contact details that operates in that market?

Yes of course, python will get the job done. Also knowing the country and region in which you wanna scrape would help as well.
