Thread: [How to improve hacking skills ?](#)

v1000 - September 9, 2024, 3:12 pm

Hello everyone,

Im beginner into hacking, but I've some basic skills. I want to know if someone know how to improve my skills, and possibly start to make some money with them.

Like learning a language that will help me make tools or learning some hacking methods to start earning money.

Stay free to help me.

Thanks.

Hacking is a vast field, you can earn money with different things :

- Bug bounty : find vulnerabilities in bug bounty programs and get paid for that. You can find vulnerabilities on web server (front / back), systems (Windows, Linux, MacOS), Mobile (Android, iOS), software, applications, IoT, embedded, ... take a look here :

<https://hackforums.net/showthread.php?tid=6225488>

- Coding : make bots / automated tasks with scripting high level languages such as Python

- Programming : create software / tools, malware (RAT, crypter, binder, ...), but it requires more skills and usually advanced programming languages such as C/C++

- Developing : make websites for customers, perform audit on it, create SMM panels, or others. This is not especially related to hacking but if you're into web hacking you could be interested to make websites too.

- White Hat hacking : working as a consulting, performing audit, pentesting as a free-lance

Don't look at what could make you earn the most, look at what interest you the most. Working in IT / Cybersecurity / Hacking requires a lot of motivation because you constantly need to update your knowledge. What you know today will not be true tomorrow, if learning bother you, don't expect to make a career in this field.

If you want more ideas to make money, just browse the market section and see what tools / services people sell. Choose a domain that you like, and start learning.

Hi there!

Kindly check out the keylogger and RATS subforums which can be a great addition to your career portfolio!

And also the Dark AI subforum because it's the current trend right!

Thanks for your response mate, I'm gonna look at that, tbh with u, it's been a while I've been interested in hacking, and always was not about white hat hacking, but trying to make money from some rat and other tools. Btw, I'm gonna look up some of the threads there are done here and get into there. Thanks for this man.
