Thread: [How performe Evil twin attack with captive portal with password verification](#)

Voiletblue - September 18, 2024, 9:44 pm

Can Anyone tell me in detailed

How to perform a Evil twin attack with captive portal with handshake hash capture and Verification
(If clients enter wrong password the portal say incorrect password enter correct password when
enter correct it match if match save that password and close attack

You won't get an Evil Twin application that tests passwords. I believe that airgeddon and wifiphisher
both do this. I doubt that there are any others.

Voiletblue - October 13, 2024, 4:00 am

both doesn't work perfect like before and airgeddon .

it crash every time

I got frustrated

I am shifting to esp 32 for that task and sure eap32 can do it just I needed to write it's code
when I perfectly written it I will post it in GITHUB
