Thread: [need help setting up quasar](#)

perfectvxena - September 25, 2024, 8:34 pm

hey people, i need some help setting up quasar it works fine and i get connecting in quasar panel when run on own test machine but when my friend opens it on his machine for testing i do not get no connection i checked ports they are also open i am using vpn for ports and also vps for rat testing

The VPN has port forwarding? Have you tested that the port is open?

i use vpn for port
Something is causing it to crash or exit.

- Open your ports by disabling your firewall on the server
- Make sure your vpn actually supports forwarding if not use another alternative
- Don't use quasar its detected (skid.)
- Make your own custom rat (no I will not teach you.)
- RE prev

Might wanna ask people in the Remote Administrator Tool section:

[Remote Administration Tools](#)

DoctorFaraday - *October 8, 2024, 2:33 pm*

If you're only doing targeted ratting and not infecting loads of people you can always get an amazon RDP from EC2.
