Thread: ["Request help in learning the basics of hacking and understanding its techniques"](#)

t123 - October 1, 2024, 7:49 am

HI?

I am a young man who is passionate about the world of technology, especially in the field of hacking. I have always been interested in the ability of hackers to penetrate systems and control data and networks. This curiosity led me to want to understand how systems work closely.

I am writing to you today asking for your help in learning this field, as I would like to learn how to enter systems and networks from a hacker's perspective. I would like to know how to exploit vulnerabilities and manipulate information.

I am looking for experienced people in this field to help me acquire basic skills such as learning cyber attack techniques and discovering security vulnerabilities. I aspire to learn how to hack systems and networks, bypass security defenses, and be able to carry out these operations effectively.

I know that this path is full of challenges and may have legal consequences if used unethically, but my intention is to learn and understand, not harm.

Thank you for your time, and I look forward to helping you on my journey to learn this field.

Regards, [T123]?

Hello, welcome to HF

Nice intro, you'll find many experienced people here, however most of the work will come from you. Don't expect someone mentoring you, it's too time consuming, if you have questions tho you can ask. To start learning and practicing go to <https://tryhackme.com> and register.

Most of the content is free, there are beginner courses for systems, network, hacking, and so on. Feel free to read this thread too, lot of information for a good start, leave a post if you find it useful : <https://hackforums.net/showthread.php?tid=6263412>

Don't forget to read the [Help Docs](#) by the way,

Enjoy your stay

Most important thing is to start with the basics, so that you don't get lost trying to understand network protocols or the Windows Registry. It's important to learn how the tech works before you try exploiting it.
