Thread: [\[Hacked\] Google Gmail - 500 emails limitation bypass](#)

lightduty - October 2, 2024, 10:42 pm

Code

```
https://href.li/?https://accounts.google.com/AddSession?hl=en-GB&continue=https://mail.google.com/mail/u/0/?fs=1%26to=datagroove@protonmail.com%26bcc=%26su=hacked%26body=hacked%26tf=cm
```

Lets explain:

- Gmail has a limitation of 500 emails per day for each gmail account.
- Grab a few gmail accounts and use with the url above.
- The url above simply request login each time before forwarding to mail.google.com
- After the user saved the credentials on the browser, it is possible to login with just 2 clicks.
- Nice trick to send bulk emails without paying to remove the 500 emails limitation.

URL demystified...

Code - <https://href.li/?> - Clear refer

- <https://accounts.google.com/AddSession?hl=en-GB&> - Account login page
- <https://mail.google.com/mail/u/0/?fs=> - Composer url
- to= - target email to deliver
- bcc= - blind carbon copy email to deliver
- su= - email subject
- body= - email body

Use an gmail generator and rotate accounts via sending emails out with a fully coded script.

Will this work too?

Most likely yes. Do you know how to simulate ctrl + enter in js?
