Introducing Argus - A Powerful Information Gathering Tool

Hello everyone!

I'm thrilled to introduce Argus, a tool I've developed to help with efficient information gathering. Argus is designed to make the process of collecting and analyzing data straightforward and effective, whether you're a cybersecurity professional, a researcher, or just curious about exploring data.

Key Features of Argus:

- Fast and efficient information collection
- User-friendly interface
- Easily customizable to meet your needs

I would love to get your thoughts on Argus! Any feedback, suggestions, or ideas for new features are very welcome. Your insights will be incredibly valuable in making this tool even better.
github.com/jasonxtn/Argus

Feel free to clone, test, and contribute. Looking forward to hearing your feedback and making Argus even more powerful together!

Thanks for your time!

I am a little confused, are you claiming you created Argus or did you make personal changes to Argus to "improve" it. The Argus I'm familiar with that also is based around info gathering and data analytics has been around for a while. While it is open source your post makes it seem like you created it. Maybe I'm overthinking this. I just would like clarification.
