Thread: [Enable windows sandbox without restarting Win10](#)

Clumsy - October 4, 2024, 5:00 pm

Hello every today I am going to be sharing a PowerShell script that I wrote that works that will allow you to enable

Windows Sandbox and HyperV without restarting your pc.

1. Open PowerShell as admin you can also do Windows key +r PowerShell.exe or Windows key +x then select PowerShell

2. Once you are in PowerShell paste the following script into your console you can ctrl +a then ctrl +v this and hit enter then you are done enjoy.

```
Code # Check if running as Administrator
if (-not ([Security.Principal.WindowsPrincipal]
[Security.Principal.WindowsIdentity]::GetCurrent()).IsInRole([Security.Principal.WindowsBuiltInRole]
"Administrator")) {
    Write-Host "This script needs to be run as Administrator." -ForegroundColor Red
    exit
}
```

```
# Enable Windows Sandbox
Write-Host "Enabling Windows Sandbox feature..." -ForegroundColor Green
Enable-WindowsOptionalFeature -FeatureName "Containers-DisposableClientVM" -All -NoRestart
-Online
```

```
# Enable Hyper-V (required for Windows Sandbox)
Write-Host "Enabling Hyper-V feature..." -ForegroundColor Green
Enable-WindowsOptionalFeature -FeatureName "Microsoft-Hyper-V-All" -All -NoRestart -Online
```

```
# Enable Virtual Machine Platform (required for Windows Sandbox)
Write-Host "Enabling Virtual Machine Platform..." -ForegroundColor Green
Enable-WindowsOptionalFeature -FeatureName "VirtualMachinePlatform" -All -NoRestart -Online
```

```
Write-Host "Made By ClumsyLulz / SleepTheGod"
```

```
Write-Host "Windows Sandbox and related features have been enabled. You may need to manually
restart your computer for changes to fully take effect." -ForegroundColor Yellow
```

Hope this helps have fun and stay safe.
