Thread: [Port Enumeration Check List Chart \[CTF/Pentesting\]](#)

Money- - October 12, 2024, 9:48 pm

I found this a long time ago. Happen to come across it again.

Sharing it here with you guys. I think is mostly very useful for CTF like B00t2R00t type of CTFs example OSCP and all.

Real Life pentesting you need to know much more than just these anyways. This is just a foundational chart, not really the complete realistic one.

The chart gives you the overall tools you needed to use on each port being found.

Its more like a mini checklist but provided only if you know how the tools worked and all.

This gives me motivation to go back into red team / pentesting stuff, it's been a while since last time I ran Kali haha

Thanks for the share !

No problem man , there are many charts like this. You can look it up online. Its mostly for OSCP/CTF boxes honestly.
