Telegram - TapSwap Like Telegram clicker Game

::Features::

Tap to Earn and Save Points: Users can tap to earn points, which are saved to a database.

Tasks Management: System to create, assign, and manage tasks.

Referral System: Users can refer others to earn additional rewards.

Statistics: Track user statistics, including points earned, tasks completed, and more.

Power Tap Bot: A bot to enhance the tap functionality, potentially automating taps or adding bonuses.

Upgrade Profit per Tap: Users can upgrade to increase the number of points earned per tap.

Upgrade Loading Power: Ability to upgrade the speed or efficiency of loading power.

Loading Power per Minute: Tracks and possibly upgrades the amount of loading power accumulated over time.

Administrative Panel on Telegram Bot: Admins can manage the app directly through a Telegram bot.

Mass Messaging: Admins can send mass messages to users through the bot.

Forward Messages: Ability to forward messages through the bot.

Save Statistics to MySQL Database: User and system statistics are saved to a MySQL database for analysis.

Backend in PHP: The backend of the application is built using PHP.

Frontend in React: The frontend is built using the React framework.

Fully Open Source Code: The entire codebase is open source, allowing for community contributions and transparency.

Share and QR Code: Users can share the app or specific content via QR codes.

Create New Tasks and Sub-Tasks from Admin Panel: Admins can create and manage tasks and sub-tasks from the admin panel.

Friends and Invited Users: Users can connect with friends and track invited users.

Backup Database from Admin: Admins can back up the database directly from the admin panel.

And Much More: Additional features to enhance user engagement and system functionality.
