Thread: [HF Give me some python projects ideas for Beginners!](#)

ipe9 - October 16, 2024, 2:07 am

Hello HF,

While I am learning python, I thought why not create a thread asking people give me projects ideas!

every time I learn coding I don't know what project I should do because there's a lot on the bookshelves

If you have list projects in your head feel free to give them away, It will help me and other python programmers too on HF!

Hello,

Did you already achieve some projects ? oneCould be good to know whichs if you did, so we could give ideas depending on what you didn't do already. Feel free to list them, so we would be aware of your current level in Python

Besides, what is your objective ? Do you want to make programs ? Do you want to work in cybersecurity ? Here again, your objective will make you work on projects or others

My goal for Python is to create hacking tools to automate tasks for me. I think that's a good Python project. What do you think?"

<https://github.com/Python-World/python-mini-projects>

You can find a table with Ideas in the README.md file, try re-doing those

You answered half of the questions, take the habit to give as much details as possible, what projects did you already achieve ?

The usual tools for hacking are :

- DDoS
- Cracker
- Bruteforcer
- Clipboard
- Keylogger
- Port scanner

You can also check the existing tools on Kali Linux and try to recreate some of them

Right now I did not achieve anything, I just want projects ideas, Trying my best give you a lot details
haha
