Thread: [\[TOR\] OnionShare - GUI toolkit for your first Darknet hosting experience](#)

Bastille - October 21, 2024, 6:25 am

EASILY SHARE FILES AND HOST WEBSITES FROM YOUR COMPUTER OVER THE TOR NETWORK

This thread is part of a larger project that will detail how the Tor network works, as well as provide a guide for attacking sites with .onion URL links.

Table of content

[TOR] [Configure your first server on the darknet](#)

[TOR] Understand how Tor networks work (coming soon)

[TOR] Performing hacking on Tor network (coming soon)

[TOR] [OnionShare - GUI toolkit for your first Darknet hosting experience](#) (you are here)

The project is called OnionShare and is a multi-platform tool to allow you get your first easy experience with sharing over the Tor Network : <https://onionshare.org/>

This tool is available for Windows, Linux and MacOS, and is already available on many Linux distributions :

It has 4 main functionalities :

People who want to get access to your web server, file shares, or chat, just need the Tor browser, no needs to install OnionShare.

You can use is to : Host you webserver easily

Share files anonymously with a lot of people (password option)

Share files anonymously with some people (password option)

Chat with people

- > No need to rely on third-parts hosts / service provider
- > Worried about the recent changes regarding Telegram ?
- > Worried that the files you share could be taken and analyzed by third parts ?

Spoiler ([Click to View](#))

Feel free to take a look at the following tutorial from the excellent Youtube channel : Network Chuck

Thanks bro, I appreciate you kind comment <3

I want to make all my threads original with real screenshots of what I'm doing, if you take a look at this thread for example you'll see on chapter 4 (OLE) and chapter 7 (XML) that I've used HF references on the screenshots : <https://hackforums.net/showthread.php?tid=6282321>

I even plan to take real pictures in some cases such as doing hardware hacking and stuff, I think it adds more value and authenticity to the threads
