Thread: [Which AI coin / token ?](#)

BitcoinLord9 - October 28, 2024, 8:08 am

We're still in a bull run with BTC, and it's widely speculated that if Trump wins the presidency, Bitcoin's value could soar. My question now is: which AI-focused cryptocurrency would you recommend to complement my current portfolio, which includes BTC and Sui? Please provide an insightful analysis that reflects a solid understanding of the market—one that others can learn from, while keeping in mind this is not financial advice

Bittensor, but you're not going to get rich on it, already well established.

I think there's a lottttt of opportunity around Sui, both in terms of holding SUI its self, and opportunity within its ecosystem.

Sui its self definitely has what it takes to be a top 10 chain, and with that, Sui's ecosystem will explode.

Some of the biggest players on Solana are currently building on Sui, either expanding their current protocol to support Sui, or building an entirely new product on Sui. Before 2024 is over you'll hear of two major names in Sol announcing Sui support. I think we'll see similar occur from innovative builders on EVM as well.

2025 is when I anticipate we see Move support begin exploding. Move based Eth L2's will become popular, we'll see chains that have historically struggled to find their footing in the EVM landscape transition to Move (Looking at you [IOTA](#)). Move will emerge as a clear #2 behind EVM, and Sui will benefit from suddenly becoming much more connected to competing chains, [drawing more money out of those ecosystems and into Sui's](#).
