LeetSpeed - October 30, 2024, 2:44 pm

What are you thoughts on e-Bikes?

rip - October 30, 2024, 2:45 pm

I love mine, depending on which one you grab/build could be too much for a beginner rider tho.

Interesting. You built your own e-bike?

I personally have never used one and I do not own one, but I have heard very positive things about them. I am currently considering buying one for myself; they seem like a good purchase.

Wow, you've got one that can reach 70mph? That's actually awesome; you've got some serious speed there! How did you go about building your own ebike?

Controlled - October 30, 2024, 6:41 pm

been looking.....and liking the idea of getting one!

Very long story short, the only thing stock on it at this point is the frame. Everything else from bolts, sprocket, to battery have been replaced/and upgraded. A lot of research was put into it tbh.

Wow, that must have taken a lot of time and dedication to upgrade your ebike to that level. I can tell that it's definitely paid off, though!

I have to look into building my own when I get more money.

Tyr - October 31, 2024, 5:30 am

I think they're awesome and at our campus we have QR codes we can scan to just hop on one and ride around. It's fun. They only go like 20 mph though.

Wow, your campus offers ebikes? That's actually pretty cool, I haven't heard of any campuses actually doing that. Do you utilize the service often?

I do if I check my phone and realize how late I am running and happen to be in the vicinity of where they keep them in order to get to the other side of campus but some of the kids who ride them are obnoxious as f*ck and will ride right at you and swerve off the last minute. I feel like sticking my hand out one day and clotheslining them when they do that. At least be respectable with them, lol. But yeah, it is pretty neat.

Yeah, if the campus is offering a service like that, other people should at least use it respectfully. Pretty nice though, that you have that option, you don't have to walk everywhere.

InspectorGadget - October 31, 2024, 7:49 am

I love my mine - just upgraded the brakes as the original ones were abit shit.

Mine complies with the law though so limited in speed and is pedal assist only. Although if you sit in 3rd gear you can do the pedal motion without any resistance and thus get full electric usage.

SuseGD - October 31, 2024, 8:19 am

That's actually pretty cool that you customized a lot of its aspects! What's the max speed it can reach?

InspectorGadget - October 31, 2024, 8:31 am

25km/h is the speed the motor cuts out at. But you can still cycle faster than that.

I've been tempted to see if it's possible to bypass but at the same time I don't have a need to go any faster and get unwanted attention from the police.

SuseGD - October 31, 2024, 9:24 am

Yeah, it sure would be pretty interesting to find the maximum speed possible, but it's definitely quite a bit risky.

Yeah I imagine it would also have a major impact on the battery life which once the battery is dead, riding an ebike is horrible!
