Thread: [Offering RUST developement services](#)

Infinity. - October 31, 2024, 4:07 am

Hi, i would like to offer programming services in Rust lang and I can cover wide range of subjects, included but not limited to:

1. Malware Analysis and Reverse Engineering Tools

- Development of tools to reverse-engineer binaries, unpack PE files, and parse executable formats (e.g., PE, ELF).

2. Secure Application Development

High-performance applications focusing on security features (e.g., secure file storage, encrypted communication).

Multi-threaded and memory-safe applications designed to handle concurrent tasks safely.

3. Exploit Development and POC Creation

Writing proof-of-concept (PoC) code for known vulnerabilities.

Development of exploit frameworks and scripting tools to automate exploit testing.

4. Cryptographic Implementations

Custom implementations of cryptographic algorithms (AES, RSA, ECC).

Secure data storage solutions utilizing encryption and hashing.

5. C2 (Command and Control) Server/Client Solutions

Lightweight, efficient C2 servers with command scheduling, real-time client monitoring, and logging.

Customizable client modules to handle tasks such as file management, network stress testing, and system monitoring.

6. Botnet and P2P Research Models

Educational botnet implementations for studying distributed networks and P2P communications.

Encrypted message passing and command execution using Rust's async libraries.

7. Defensive Security Tools

Development of anti-malware tools, sandboxing applications, and threat detection software.

Security auditing utilities for analyzing system vulnerabilities in real-time.

8. Binary Analysis and Instrumentation

Dynamic analysis tools to inspect binary execution in real time.

Creation of custom loaders for binary introspection and relocation handling.

Send me a PM for more details if you are interested.
