Newest Crypto Gem. MoonBag \$MBAG

Been watching this memecoin for some time, watched since presale. Dropped 99% on launch so best/worse time to buy.

On analysis, staking rewards from presale will be unlocked on the 11th of November, increasing the supply from 29.55B to 76.15B. Advise will be to buy a small bag. 100\$ or so max at price under \$0.00004

A burn protocol worth 2.5M, will begin with it's first phase. Total of 5 phases with 500,000\$ worth being burned every 3 months starting from the 11th December 2024. Last burn is scheduled for 11th December 2025

Already 24% of the total supply has been burned, coin price should increase from between \$0.00005 up to \$0.0035 which was the presale price.

I already got a nice bag
